Core Topics Covered in the 2019 Chemistry Regents

The content of the 2019 chemistry regents encompasses a comprehensive array of chemistry topics aligned with state standards. These topics form the foundation of high school chemistry education and include both theoretical and practical aspects of the discipline.

Atomic Structure and the Periodic Table

Understanding atomic structure is fundamental, covering the arrangement of electrons, protons, and neutrons, as well as isotopes and ions. The periodic table is emphasized for its organization of elements based on atomic number and properties, including periodic trends such as electronegativity, ionization energy, and atomic radius.

Chemical Bonding and Molecular Structure

The exam tests knowledge of ionic, covalent, and metallic bonds, including Lewis dot structures and VSEPR theory to predict molecular geometry. Students must recognize how bonding influences physical and chemical properties of substances.

Chemical Reactions and Stoichiometry

Balancing chemical equations, identifying reaction types (synthesis, decomposition, combustion, single replacement, double replacement), and calculating reactant and product quantities are key components. Stoichiometric calculations involving mole ratios and molar masses are frequently assessed.

States of Matter and Gas Laws

The properties of solids, liquids, and gases are examined alongside gas laws such as Boyle's, Charles's, and the Ideal Gas Law. Understanding the behavior of gases under various conditions is crucial for solving related problems.

Thermochemistry and Equilibrium

Topics include energy changes during chemical reactions, endothermic and exothermic processes, and factors affecting chemical equilibrium. Concepts

like Le Chatelier's principle and activation energy are integral to this section.

Solutions and Acids-Bases

The properties of solutions, concentration calculations (molarity), and factors influencing solubility are covered. Acid-base theories, pH calculations, and neutralization reactions are also important topics.

Organic Chemistry and Nuclear Chemistry

Basic organic compounds, functional groups, and simple reactions are introduced. Nuclear chemistry topics such as radioactive decay, half-life, and nuclear reactions may also appear on the exam.
