Understanding Wordle Gameplay and Mechanics

Wordle is a word-guessing game that requires players to deduce a secret five-letter word within six tries. Each guess must be a valid five-letter word, and players receive color-coded feedback after each attempt. This feedback guides players toward the correct solution by indicating which letters are correct and in the right position, which letters are in the word but

misplaced, and which letters are not in the word at all.

Color Feedback System

The game uses three colors to provide hints about the accuracy of each guessed letter:

- **Green:** Letter is correct and in the correct position.
- **Yellow:** Letter is in the word but in the wrong position.
- **Gray:** Letter is not in the word.

This feedback mechanism is crucial for players to iteratively refine their guesses and approach the correct word logically.

Start with Common Letters

Beginning guesses with words that include frequently used letters such as E, A, R, I, O, T, and N helps maximize the information gained from the initial attempts. This approach narrows down possible solutions early in the game.

Use Process of Elimination

Pay attention to the color-coded feedback to eliminate unlikely letters and positions. For example, if a letter is marked gray, it should be excluded from future guesses. Consistently applying this logic helps refine guesses and avoid wasting attempts.

Consider Word Patterns and Letter Placement

Analyzing common English word structures, such as consonant-vowel-consonant patterns and common suffixes or prefixes, can guide more educated guesses. This tactic is particularly useful when approaching mid-game guesses after initial feedback.

Maintain a List of Possible Words
