Old Navy virtual try on technology leverages cutting-edge augmented reality (AR) and artificial intelligence (AI) to simulate the experience of trying on clothing items virtually. This technology uses a customer's smartphone or computer camera to overlay digital images of apparel onto their live video feed or photos. The virtual try on system accurately maps clothing onto the user's body, adjusting for size, fit, and movement to create a realistic preview. Through machine learning algorithms, the platform can recommend sizes and styles based on the user's body measurements and past preferences. This innovation eliminates many traditional barriers to online shopping, such as uncertainty about how a garment will look or fit in real life.

Technology Components

The core components enabling Old Navy's virtual try on include 3D body scanning, AR visualization, and AI-driven personalization.
