Understanding Wordle: Rules and Gameplay

Wordle is a daily online word puzzle game where players have six attempts to guess a hidden five-letter word. Each guess must be a valid five-letter word, and after each attempt, the game provides color-coded feedback indicating the accuracy of each letter's position.

Basic Rules of Wordle

Players enter a five-letter guess and receive feedback using the following color system:

- **Green:** The letter is correct and in the correct position.
- **Yellow:** The letter is in the word but in the wrong position.
- **Gray:** The letter is not in the word at all.

This feedback guides the player toward the correct answer within six attempts. The game's simplicity and daily timing make it an engaging and addictive challenge for users worldwide.

How the Wordle Answer is Selected

The Wordle answer for each day is selected from a curated list of five-letter English words. These words are chosen to be common enough to guess but not too simple, striking a balance to maintain player interest. The January 7 answer "share" is an example of a common word that fits these criteria.

Strategies to Solve the January 7 Wordle Efficiently

Starting with Common Letters

One effective strategy is to begin guesses with words containing frequently used letters such as S, A, R, E, and T. Since "share" contains several common letters, guesses incorporating these can quickly reveal useful clues.

Using Process of Elimination

Eliminating letters that receive gray feedback helps narrow down possible words. For example, if a guess includes letters not present in the word, players can exclude all words containing those letters from their subsequent guesses.

Considering Letter Placement

Yellow feedback indicates the presence of a letter in the word but in a different position. Adjusting guesses to test alternative placements of these letters helps isolate the correct arrangement, as was necessary when deducing the word "share."
